Tour-proven utility irons for serious golfers

## 『TOUR WORLD TW-U FORGED』 Debut

Ideal for golfers wanting longer carry distance with a classic look that transforms seamlessly into any iron set within the TW series.

HONMA GOLF Co., Ltd. Head office: Roppongi Hills Mori Tower 35F, 6-10-1 Roppongi, Minato-ku, Tokyo; representative director & president: Yasuki Ito; released TOUR WORLD TW-U FORGED.

HONMA's TOUR WORLD TW-U FORGED is the second-generation TW-U. Based on feedback from TEAM HONMA tour staffers who've used the predecessor in tournaments, this new version has classic shaping that better male and female golfers prefer.

The clubhead incorporates forged soft iron that yields solid impact feel. Compared to the previous model, this clubhead is shorter and higher – a traditional look that flows seamlessly into any iron set within the TW series. Tungsten weights (4.5 grams apiece) on the toe and heel of the back clubface -- combined with a wide sole -- provide a low and deep center of gravity that increases the moment of inertia. The thinner clubface, hollow clubhead structure and high-strength iron collectively enhance carry distance.

Four lofts are available, to help satisfy the diverse needs of serious golfers.

The TOUR WORLD TW-U FORGED is available with various shafts. For serious golfers, the heavyweight zone carbon shaft VIZARD IB features amorphous metal fiber at the tip. For female professional golfers, the lightweight zone carbon shaft VIZARD IN lets players take dead aim at the pin while achieving a high launch angle. It's also available with any shaft offered in the TW737 iron line.

A wide range of product variations allows golfers to find the club best suited to their game.
