

~Features the ideal head stability and feel that TEAM HONMA demands.~

## A new double-bend mallet added to our TOUR WORLD TW-PT series

HONMA GOLF Co., Ltd. (head office: Roppongi Hills Mori Tower 35F, 6-10-1 Roppongi, Minato-ku, Tokyo; representative director & president: Yasuki Ito) has released the TOUR WORLD TW-PT Mallet (Double-bend).

The TOUR WORLD TW-PT putter series embodies ideal putter head stability, feel and looks. Until now, our putter lineup consisted of a center-shafted mallet and a blade. We are now proud to introduce a double-bend mallet to our lineup. This increases our range of options that can be tailored to different putting styles.

Double-bend mallets are notable for their broad level of tolerance for mishits. So even if the ball is hit off-center, both ball roll and direction are kept in check. The double-bend mallet's offset helps golfers to stop pushing their putts. This new model is ideal for those seeking to stabilize their stroke and contact point with the ball, and wanting to suppress downward blows while minimizing face rotation.

For an outline of the "TOUR WORLD TW-PT Mallet (Double-bend)", please refer the next page.

TOUR WORLD TW-PT Mallet (Double-bend)
